

Case study on Python Flask

Using the iris dataset, create a web application to take feature inputs from the user in a web page and print to which species it is classified.

Please note the following:

- Do a screen recording explaining each and every step.
- Please follow ‘video submission guidelines’ for further details.
- Save the video in your google drive.
- In Paatshala, submit
 - ❖ **Google drive link** of recorded video.(Provide necessary access)
 - ❖ Complete files as **.zip** file.
 - ❖ The **hosted website link**.
- Please keep your name as the file name.
- **Do not include the video inside the .zip file.**
